7	2 - Document titled nortonia in Sheet - Attendance		
8			
9	(Proceedings began at 6:00 p.m.)		
10	MR. CLEGG: Dennis Clegg, the Town		
11	Chairman. I'll call this special meeting to		
12	order on behalf of MCC. And the Town Board		
13	is here, Nancy Willenkamp, first supervisor,		
14	Jules Zuehlsdorf is the second supervisor.		
15	MR. HAMBLIN: Call the planning		
16	commission meeting to order as well. Clerk,		
17	can you take role?		
18	MS. NEUENFELDT: Yep. So for Town		
19	Board, Nancy Willenkamp?		
20	MS. WILLENKAMP: Nancy Willenkamp.		
21	MS. NEUENFELDT: Jules Zuehlsdorf?		
22	MR. ZUEHLSDORF: Here.		
23	MS. NEUENFELDT: Dennis Clegg?		
24	MR. CLEGG: Here.		
25	MS. NEUENFELDT: Planning Commission.		

1	Ben Hamblin, chair?
2	MR. HAMBLIN: Here.
3	MS. NEUENFELDT: And then on the
4	phone we have Tom Boettcher?
5	MR. BOETTCHER: Present.
6	MS. NEUENFELDT: Okay. And then we
7	have alternate Craig Jordan.
8	MR. JORDAN: Here.
9	MS. NEUENFELDT: All right. Also
10	present is Building Inspector Paul Hanlon
11	and Attorney Matt Parmentier.
12	MR. HAMBLIN: Let's rise for the
13	Pledge of Allegiance.
14	(Pledge recited.)
15	MR. PARMENTIER: I think I'll take it
16	from here.
17	MR. HAMBLIN: Sure.
18	MR. PARMENTIER: Good evening,
19	everybody. My name is Matt Parmentier. I
20	am the Town attorney. As you heard, we've
21	got members of the Town Board and the Town
22	Plan Commission here for this meeting, which
23	is considered a Joint Public Hearing. We'll
24	talk momentarily about exactly what that
25	means.

Some of you were here for a similar meeting back in, I think it was March, during the spring anyway, to talk about the MCC expansion or their proposal to expand. Tonight's meeting is similar but different from that meeting, for those of you who were here.

And I think it's helpful to start by just talking a little bit about how did we get here, where are we tonight, and where do we go from here, so that everybody who's here understands the process, how this evening's hearing will go, what your opportunities are in terms of presenting things to these folks up here, and so on. So I'll give you guys a little bit of an overview here before we get into the typical hearing stuff.

So for those of you who were here in March, we were here to talk about a proposal for an agreement between the Town and MCC.

Not a formal zoning approval, but an agreement. And what led to the discussion of that agreement was a -- I guess a difference of opinion on the status of the

current quarry, and the legal status of the proposed expansion.

And without getting into the weeds, because it's sort of irrelevant at this point, but within zoning law there's a concept called nonconforming use, which means something is grandfathered. That's the sort of colloquial term for it, but the legal term is nonconforming use. And we had a discussion about whether the MCC quarry was a nonconforming use, and in addition, whether this expansion would be considered part of the nonconforming use as well, and therefore, exempt from zoning.

Without getting into all the nitty-gritty, the rules for nonconforming use for quarries are a bit different than everything else. It's a special rule, it's called the Diminishing Asset Rule, and it does expand what's grandfathered into, you know, some expansion beyond the -- or potential expansion beyond the existing borders, because quarries, by their very nature, get larger as they're used up.

So there was some discussion back in

March, at a meeting, to talk about that concept and whether there's a way to sort of resolve the disagreement on it. It ended with no agreement. The Board made the determination that MCC was going to be required to submit formal zoning applications rather than work towards an informal agreement, and that's what MCC has done.

So the proceedings here tonight are related to MCC's application, a formal zoning application at this point. MCC's application really consists of three different applications, and I want to walk you through all of them, so that everybody up here and out there understands some of the details here.

So as background, it's helpful to know that the Town has, within its zoning ordinance, something called a quarry overlay district. The zoning ordinance, like all zoning ordinances, divides the Town up into different zoning districts, and different things are allowed in different zoning districts. The quarry overlay is an overlay district, which means it exists on top of

other zoning districts, and in the Town of Hortonia, it exists on top of the agricultural districts, and that's the district that allows for quarrying uses.

Within the quarrying overlay district, a quarry that includes blasting operations are considered a conditional use, which means that they have to obtain a conditional use permit in order to engage in quarrying with blasting. And so one of the applications that's coming before the Town from MCC, which MCC will explain, I'm sure, is an application for a conditional use permit.

They have also submitted an application to rezone a few parcels of property. Along Givens Road, there's a handful of smaller lots that are currently zoned residential, and I think you'll hear this from them, they're looking to use those as part of the quarry expansion, maybe for setbacks or buffer, but we'll let them explain that.

In order to include those parcels, they need to be put into this quarry

overlay; again, the only place where that would be allowed. And so the second application that MCC submitted is to rezone those properties into one of the districts that falls within this quarry overlay to allow those to become part of the quarry.

And then the third application that MCC submitted is for an amendment to the Town's comprehensive plan. The comprehensive plan is a big 200-page plan document that the Town has enacted. Its purpose is to lay out visions and goals for the Town, including for the development of the Town. The Town's comprehensive plan looks out to the year 2036 and says, what we do want land use within the Town to look like between now and that time.

Anytime that somebody applies for a rezoning, which is part of what MCC is applying for, the Town has to, among other things, look at that comprehensive plan to determine whether the proposed rezone is consistent with what the plan says or inconsistent with what the plan says. Part of that plan is a map, and that map is

called the future land use map. Future land use map shows every parcel within the Town of Hortonia, and what the future plan is for that parcel. They all have a designation on that map for their future intended purpose.

So the properties that MCC has requested rezones for are currently shown as intended for residential use in that plan.

Again, I don't speak for MCC, but they submitted an application to amend that map to show those properties as being intended for a quarry-related use or an agricultural-related use, something that is consistent with the rezone they're requesting.

So the comprehensive plan amendment is sort of a key to unlock the rezone; the rezone is needed to add those additional parcels to the quarry; and the conditional use permit is required for the quarry expansion with blasting. That's how all the pieces fit together. Okay? It's complicated, but hopefully it makes a little bit of sense.

Each one of those approvals -- the

conditional use permit, the rezone, and the comprehensive plan amendment -- all follow their own procedures that are required by State statute. All three of them require the Plan Commission, the -- this half of the table, to make a recommendation on whether to approve, deny, or conditionally approve, and they all require the Town Board to make the final determination. So before this process is all said and done, Plan Commission will make recommendations, Town Board will receive those recommendations and make final decisions.

What is a bit complicated, as far as our process goes, is some of those things are supposed to have hearings before the Board, some of them are supposed to have hearings before the Plan Commission, and so rather than break this up artificially and have a hearing on certain aspects before the Board at one of their meetings, other aspects before the Plan Commission at one of their meetings, that doesn't really make sense, because I think everyone wants to talk about the proposal in general, not the

rezone specifically, or the comprehensive plan specifically, or anything like that.

And that's why we set this up as a joint public hearing of both bodies on all of the applications, so that we can just talk about the proposal, and leave it to us to sort out how all the comments fit with each of the different pieces. So that's why we're handling it that way tonight.

Each of those have different standards that these folks up here will have to apply when they are evaluating the application, but, you know, that's going to come later on.

Tonight is just the hearing. Hearing means hearing. They're here to hear what everybody has to say. There won't be any deliberating happening tonight, there won't be any decision making happening tonight.

That comes later on down the road. I think for tonight's purpose, if we get through the process of hearing the application and hearing everybody's comments on it, making sure we understand all of that, that's a success as far as, you know, getting through

what tonight's really about.

25

So as part of that, the way we'll do this is, when I'm done talking, we'll turn the floor over to MCC. They have their representatives here. They'll be presenting their application. It's up to them what they want to present. I assume it will be here's what we are applying for and here's why you should approve it, but they can present whatever they wish. They'll have as much time as they need to make their If they have documents, they presentation. can submit them. We will keep a record of documents up here, and I'll add some to it shortly.

When MCC is done with its presentation, we'll then open the floor to anyone else who wants to comment. There is a speaker sign-in sheet, which is up here right now. I see four names on it. So if you do want to speak, get yourself on that list. And maybe when I'm done talking, we'll take a pause and we can circulate it again, to make sure that anyone who wants to talk gets themselves signed up, because we

will run off of that list to call on people to talk.

When you are called on, since this is a more formal hearing, come up to the table, state your name and spell it -- we have a court reporter who's transcribing, so we don't want your name spelled wrong -- and then you can present your comments.

When everybody has talked, we'll circulate it one more time, just to make sure there's nobody else left to talk, and then that will be the end of that portion.

We'll turn it back or over to MCC at the end of the comments, they can have the last word, they can respond to whatever it is that they heard, any questions that are raised, anything like that.

When that's done, if there are questions from the people up here about what they heard, they can ask them. If not, we'll adjourn, let it sink in, and we'll set up another meeting to start the next leg of the process.

So the meeting back in March went very well, it was very orderly. I appreciate

that from all of you who were here. I'm expecting that tonight as well. Some things that we'll do just to make sure things stay orderly again, we'll have the sign-in sheet going around. We do have a court reporter who's here, who's typing everything that's being said. We're doing that to keep a good, thorough record of the decision-making process, for lots of reasons, one of which is if anyone here chooses to sue the Town, it's important to have a good record of why the Town does what it does.

So talk slowly, talk loudly, don't talk over one another, because you can only type what one person is saying at a time. So another reason, if it's not to make me feel good, another reason to keep things orderly. You'll all get your turn to comment. There are no time limits, so you can have as much time as you wish to make your comments. You know, don't worry about time.

If your comments consist of questions, we'll have a special process for that. I don't want to have a back and forth question

and answer session during public comment, because that's not what public comment is So if you do have a question, state it, I will write it down, I suspect MCC will write it down as well, and then when MCC is doing its final comments, they'll address it, or if they don't address it, I will mention it, so that you get answers to your question. I just don't want, within the public comment portion, to start having back and forth conversations among people out 12 So that's how we'll handle there. 13 questions.

And if you have any materials, any documents, any written statements or anything else that you want the Town to be able to consider, please submit them. We'll hang onto them and we'll make them a copy -we'll make them a part of our documentary record. So that's the other thing. again, when that's done, we'll wrap it for the night.

To start off this documentary record, I have a few things that I'm going to put here to start the pile, and I'll tell you

what they are. And these are just background documents, you know, background information that you guys have already reviewed, but I want them to be part of our pile here.

So the first thing that I have is a copy of the legal notice that was published, just to confirm that everything was done the way that the statute requires as far as notices go. So I have a document, it's marked Exhibit A, and that is a copy of the legal notice.

I'm putting in another document that's a copy of the -- a complete copy of the application that was submitted. I've got that marked as Exhibit B. That consists of the original application that MCC filed, as well as a follow-up submittal for the comprehensive plan amendment, so those two things will be Exhibit B.

Exhibit C, I have a copy of the Town zoning ordinance. That's what governs our process here, so I want that in the record.

Next one is Exhibit D. That's the comprehensive plan. That is the document

that governs rezone decisions. It's also the document that MCC has applied to amend. So that's part of the record.

The last thing that I'm putting in here is a copy of a State statute. This is something -- maybe the folks up here have heard about this, Act 67, which is a State law on deciding conditional use permit applications. And I'm putting it in here to make sure, you know, everybody's clear that this is what we're following.

And just to talk briefly about it, the statute, fairly recently, was amended to require a sort of heightened standard in terms of deciding a conditional use permit. So what it says, basically -- there's details to it, but what it says basically is decisions on a conditional use permit have to be based on substantial evidence. That's the key term.

And there's a definition of what that term means. I'll read it for you. It says: Substantial evidence means facts and information, other than merely personal preferences or speculation, directly

pertaining to the requirements and conditions an applicant must meet to obtain a conditional use permit, and that reasonable persons would accept in support of a conclusion.

So when MCC presents its application, when people have comments, we'll take everything in. When it comes to evaluating the conditional use permit application, our job will be to apply the standards in our zoning ordinance, using whatever evidence comes in that qualifies as substantial evidence under this definition. We'll talk more about that at the next phase of things, but keep that in mind, and I'm putting that in the record as Exhibit E, so that we have that for reference.

So that's everything that I have, and those are my comments. Do you folks up here have questions on what I just went through?

MR. HAMBLIN: No.

MR. PARMENTIER: No? Everybody feels okay? Okay. With that, we'll turn it over to MCC to present your application. Feel free to come on up and just state your names

and spell them for the court reporter.

MS. NEUENFELDT: Just before you start, so just as a reminder, if people could take a minute to silence their phones, if they haven't already, just because sometimes that doesn't happen, so that was it.

MS. COURTER: I did that. I was worried about it. Matt, thank you for that very careful unpacking of all of those elements. I find it very helpful.

My name is Susan Courter, and I've been helping MCC design their environmental protections for this application packet. So we've been working on this for a while. I'm a geologist by training, and I've been working with the Nonmetallic Mining Advisory Committee for reclamation in the State of Wisconsin.

So I'm not here alone tonight. I have a number of other specialists with the team here that provided input to that packet you received. Mark Krumenacher, he's a licensed hydrogeologist looking at water issues. Garret, our licensed blaster with

the company.

I think I saw, oh, Scott MacWilliams, he's a certified appraiser, because questions came up relating to property values. And I noticed, I don't see him now, but a specialist here from the East Central Wisconsin Regional Planning Commission for reclamation, also to answer questions.

So I think that the comment that we're here to listen to concerns and comments, because this is the first you've had to look at this application packet, is what we want to do. I brought a few maps, and I will do a brief summary of the operation in order to inform your comments later on. Okay?

And I'm going to just start with a little bit of history. I've known MCC now, gosh, maybe more than a decade, maybe it could be two decades. But this quarry, in particular, has been around since the 1930s, and we kind of forget about that history, but it didn't really become important to the this area until the 1960s, the late 1960s, when the Highway Transportation Act

expanded, and that's when MCC took over the property.

The packet includes all of the dates of their purchases of the property, all for the intention of future reclamation -- or future extraction, and in 2007 it was that they registered their resource on that property, the ones you're looking at today, to protect it for future use.

this quarry is used locally. This is kind of the area. It doesn't quite get down to Fond du Lac, it doesn't quite, you know, get far into Central Wisconsin, it's not going to Chicago or Milwaukee. Most of it's being used locally, and I think you probably, if you live nearby, know that much of it was going to the highway reconstruction just recently, simply because that's part of the strategic plan to improve the safety and access of the roads.

So this is their area, and they've been around. But what I can tell you is, as a geologist who looks for and develops mineral resources, is that they're not found

just anywhere. They're never found where people want them to be. But this particular project, which is here, Givens Road, Ledge Hill Road, Highway 45, on the outskirts of New London, has been identified as an important mineral resource in this area for a long time, and this supports the strategic planning goals of the Town and of the County.

So their existing quarry is right here. This is the 114-acre collective parcels that are looking to be rezoned to facilitate this planned expansion.

And Matt did mention that the smaller parcels along the road, along Givens Road, were earmarked for a buffer, really, just to have these where it would be no extraction, but, you know, berms, buffers, and setbacks for the road and the property owners to the south.

Okay. What else do I want to tell you about that. Just the operation plan.

Can I just go through just a few elements of the plan then? 114 acres really, it's going to be very similar to what you've experienced

in the past, developed incrementally. They strip a row of material, they place it around the perimeter, it's drilled and shot to facilitate extraction.

And so that same process of moving from the base of the quarry, which is the entrance, that's elevation of 840 feet, and moving from the west to the east, according to our plan. So this is what is -- you know, what has been occurring in the past is what you can expect if the future. What else about that...

Oh, truck access. So materials are still going to continue to depart the property the same way as they have before, off of Highway 45. No changes there. Unless somebody needs a delivery in the perimeter, there'll be no changes on that.

What else did I want to say. I do want to talk about the berm, because, you know, jumped the gun, we -- they started the berm on this Givens Road, and we've been waiting for this meeting and decisions to get that seeded and have the next steps for that berm where material was stripped in the

existing quarry and placed there.

I think -- yeah, so in terms of our plan, it's a bigger document. I hope everyone had a chance to see that. It kind of -- it touches on some of the safety and environmental health and safety aspects, such as buffers, signage, locking gate, it has the storm water pollution prevention plan features to that, fugitive dust control plan.

You know, in general, nonmetallic mining operations such as these are highly regulated and looked at from MSHA, the Mine Safety and Health Administration, the Department of Commerce's blasting, East Central Wisconsin and Outagamie County for reclamation, the DNR, as well as the Town of Hortonia, where it operates.

So kind of in conclusion, so that we can get to your comments, is that it is an existing operation, it's not a Greenfield site. It's something that has been considered and planned for some time. And it's also a very quality resource. You have a concrete batch plant here because they can

make concrete. It's that good of a material. Not all materials are suitable for that purpose.

And I want to add just a little bit about MCC. You know, it's such a respected business. I think they have nearly 400 employees. I don't know, Brian, if you want to say a little something about the history, which you know better.

MR. MURPHY: I'm Brian Murphy. I'm one of the owners of Black Creek Limestone and MCC. I'm third generation. My grandparents started the company in 1926, so in '26, we'll be celebrating our 100th year in business. Very proud of that. I thank the Board for their considerations. Thank you.

MS. COURTER: And then from my own experience with MCC, you know, you might get in a ditch sometimes, but MCC is the kind of company that you can call, just anyone there, and they will come and plow you out and help you out, if something is amiss, or your yard is being flooded, or maybe the culvert gave way for a flood.

1 So I just really want to throw that 2 out there, which it's not a technical 3 aspect, I have lots of information on the 4 technical aspects, and again we have this 5 team here of people to answer questions, but 6 just from my heart and knowing the people 7 there, that they do strive to do the right 8 thing, and they have been there, not just 9 for me but for others in their neighborhoods 10 in the past. 11 UNIDENTIFIED SPEAKER: Scott, do vou 12 want to get up and --13 MR. SWEENEY: Yeah. My name is Buck 14 Sweeney, and I'm an attorney. I work with 15 Mitch Olson with the Axley law firm. 16 was at your last meeting on it, so we've 17 been doing -- Mitch and I have been doing 18 this for a long time; I've been doing it for 19 longer than he has. But anyway, we're going 20 to have Scott MacWilliams, he had a report, 21 and I'll hand it out if that's all right, 22 Matt, can I hand it to everybody? 23 MR. PARMENTIER: Yeah. Sure. Do you have a copy -- an extra copy? 24

26

MR. SWEENEY: And along with that

we've got, stapled together, we've got some public comment that I'll talk about in just a little bit. But Scott can get up and just talk a little bit about the property value issues. Scott, if you want to go ahead.

MR. MACWILLIAMS: Sure. Evening. My is Scott MacWilliams. I'm a real estate appraiser, I'm a real estate broker. I was asked to comment on impacts to residential landowners.

When I look at -- and I've been doing this for -- I don't want to date myself, but I've been doing this for 45 years. Okay? I kind of specialize in environmental issues and environmental appraisal, so I've done a lot of contaminated properties, I've done siting for landfills, I've done contaminated industrial sites, convenience stores, and it's kind of a special area of appraisal.

So what does an appraiser or a real estate person look for in regards to a negative impact on property values?

Normally when I go out and take a look, it's a rather simplistic approach that I take.

I'm looking for -- I'm looking for

reductions in sales price, whether or not there's a prolonged marketing period, whether or not there's any evidence in the market of financial -- getting financing or difficulties getting financing, and I just look at the general development in and around an area.

This particular -- and I'm just going to -- I'll just call it the MCC or the New London quarry, has been in existence since 1960. Most of the residential development that I see that happened in this immediate area has taken place since then. So for instance, one of the sales that I'm -- and I'm going to talk about it in a second, a little bit about my report. It's 85 pages and it's -- it will crack your lips type of reading. It's not exciting stuff.

But what I'm basically doing is I try
to find sales that are approximate to, in
this instance, a nonmetallic mining
operation, and then I just simply compare
the price per square foot, the days on
market, and the marketing indicators to
properties that are not located next to

mines. So you've got some close, some far.

And the whole idea of this is to say, if there's going to be an impact, you've got to see some identifiable market activity that's happening proximate to what you're looking at, and you see if that is something that is a regular-occurring factor, if you're going to have a negative impact on residential values. So that's what I'm looking for.

My report, this 85-page report, in this -- included in that report is six separate studies on nonmetallic mining operations. There's two in Dane County, there's one in Green County, there's one in Sheboygan County. But the one that I was most interested in, and the one that I think everybody -- you want to get as local as you can get, so I did do a study around the existing New London quarry, and I found four sales of properties have that occurred in a real close proximity to the subject property, and I'm just going to brick this up here because not probably everybody can see it.

This is the Shady Acres subdivision

to the south. The Shady Acres subdivision was developed in the early 1970s. residential lots, kind of drops down in there, nice wooded. I found one sale in here, and that particular sale's about 2,000 feet, if I measure it as the crow flies, to the quarry. So that's a proximate sale for I'm trying to get as close as I can me. get. (Brief discussion off the record.) MR. MACWILLIAMS: All right. 12 found one sale in the Shady Acres 13 14 awav.

21

22

23

24

25

immediately to the south, about 2,000 feet Found one up on McAroy [sic] Road, and that's crossing on 45, and then another one on the Saint -- I forget what it is, but -- it is up above -- I'm gonna say it's Saint something-or-other road. I'll think of it in a second. It's way to the north. I'll probably have to peek at my report. forgot the...

And then I found one on Deer Brook Road to the south. So I got McAroy, Deer Brook, Shady Acres, and Saint. Four sales. And what I did with those sales is that in

30

So I

MLS, when you take a look at those sales and the WIREX up in this direction, that's the state-wide MLS, what you basically have is they'll take a look at the list price, the sales price, and then they'll take a look at the days on market, and they'll give you a finished price per square foot. So if you have a \$100,000.00 sale and it's got 1,000 square feet of finished area, then the realtors like to say it sold for a hundred dollars a square foot.

So I'm looking at the price per square foot, how long it was on the market, and the list price to sale price. Because if you have a property that was listed for \$400,000.00 and it has to get sold for \$300,000.00, then that looks like the negotiation was -- you know, obviously the negotiating price was down.

And basically, in this instance, what I found in those four sales is that the price per square foot on most of these sales -- and most of these were '70 houses. My sale criteria, I look from the middle of 2022 to date, because I wanted to have some

I was able to find four that recent sales. were fairly close. Furthest one away was 3,000 square feet. Closest ones were 1,700 square feet. And what I basically found was the price per square foot was consistent in regards to other comparable sales that were not proximate to the property. It was -some were a little higher, some were a little lower, but I looked at the mean and the average, and the -- in each one of these four sales, I saw nothing to indicate some sort of -- some sort of discounting that would stand out and say, something's going on here.

thing. As we all know, in the -- well, if you've sold a house or bought a house or tried to buy an entry-level house anywhere in the last couple years, you realize that this has been one of the hottest markets -- and I've been doing this since 1972 -- this has been one of the hottest markets ever. So basically some houses were getting -- a lot of houses were getting bid up. Because the average sale price in this particular

area, in Outagamie County, is roughly \$399,000 for an entry-level house. Okay?

Most of these houses that I found -and it's in my report, and I hope you take a chance to take a look at it. This is analysis number six. The sales prices range between 150 and 170 dollars a square foot for each one of these houses. And the sales prices for the non-proximate sales, some ran a little higher, some ran lower. instance, the sales price for the proximate house was the -- was above the average. Now, I'm not saying that a quarry adds value to a property, but I'm looking, does it have a marketable -- a marked effect on the negotiations, days on market, price per square foot.

I did this also for five other additional sales. Like I said, there's a couple in Dane County, one in Sheboygan County, and one in Green County. All non-metallic mining operations, and always doing the same thing, trying to find sales as close as I can get and find out if there's something happening with the

1 marketing due to the proximity to the mine, 2 or the quarry. 3 So in my estimation, there's nothing 4 that I see, especially in the four sales that I saw -- that I found next to the 5 6 New London quarry, that would give me any 7 indication that, hey, there -- everything's 8 dropping down and -- or something's 9 happening here in the -- it takes longer to 10 sell and they're selling for less. 11 And I'll be around for any other 12 questions or anything like that. Appreciate 13 your time. 14 UNIDENTIFIED SPEAKER: How about a 15 question right now? 16 MR. PARMENTIER: Hold on. If you do 17 have questions, we'll save them all to the 18 But you -- but I'll make sure that end. 19 your --20 UNIDENTIFIED SPEAKER: When do I pose 21 the question to you? 22 MS. NEUENFELDT: The end. MR. PARMENTIER: Yeah. 23 When it's 24 public comment time, let me know what it is, 25 I'll write it down and I'll make sure you 34 get an answer.

(Brief discussion off the record.)

MR. SWEENEY: My name is Buck Sweeney, and I just wanted to kind of comment on little bit, and I -- there's another exhibit that I attached, too, along with that, and it's a list of letters of support, and I'll just kind of -- I'm not going to go through and read all of them, I just want to summarize them. But before I do that, I just want to talk a little bit about this particular quarry.

This quarry has been around for a long time, as people have said, and we're -- it's an expansion of an existing operation. You know, Matt said we're going through a conditional use permit, and we are. Some of us think that we don't need one, but we're going to do it anyway, because we want to work with the town, we want to work with this board and go through the conditional use permit, because we think we have enough expertise and we've got a very, very good operator in MCC, that we'll get it, but we want to preserve our rights that we still

think it qualifies as nonconforming use.

There's also going to be some additional legislation that the aggregate producers of Wisconsin are pushing through, that might clarify some of the ambiguity that came out of the last legislation. But that's two years, three years down the road, and we don't want to wait. We want to get a conditional use permit and move forward. We think that's important.

We also -- this industry, as you guys know, is very regulated. You got MSHA, the mine health and safety administration, you have to deal with OSHA, you have to deal with both of them and their jurisdiction. You have to deal with the DNR on the water, and you have to deal with the State of Wisconsin on blasting.

We have experts on blasting here tonight, we have experts on water, to address any questions that come up on that from the audience out here or from the board members, and we'll do the best we can to answer all those questions on it.

The letters of support that we have

included, some of them have come from our peers, Michels Corporation, Mashuda, Faulk Brothers, all supporting it because they like the materials that come out of this. The materials that come out of this meet all the state specifications. A lot of times you have limestone quarries that are too soft, and they're fine for base course, but you can't use them in the concrete or in the asphalt operations. They just aren't strong enough and they'll break down. This has got a very, very high quality rock that's used, and Michels and Mashuda have used it, a lot of the contractors around here have used it. There's also a letter from Waupaca

18

19

20

21

22

23

24

25

There's also a letter from Waupaca County, and we mentioned that a little earlier. They take a lot of material out of this a year. 250,000 tons of material were purchased over the most recent last five years, which is a lot of stone coming out of there on it.

There's some of the established companies that understand the importance of it. There's letters from Sommers Construction, Don E. Parker Excavating,

Robert Immel, all support the planned expansion because they want to have the product that's very important for it. A number above residential neighbors understand the value of this quarry, and there's letters in there from some of our neighbors.

There's also dairy farming. We have Doug Casey Excavating, LLC, has the bedding sand from the Hortonia site, the area farmers who've been used, a lot of it's come out of there. Area contractors have also been -- there's K&H Concrete, who operates, Lee Werth Concrete Construction, that we supply a lot of the New London marketplace.

We also have -- this is a company that's been around a long time. I was shocked at the number -- when we talked to the MCC employees, not everybody's happy when you work, but the majority of them are very happy and they wanted to support this and they wanted to write letters. We didn't pressure them to do it, they volunteered.

So we've got a good company, good operations. We want to work with this town,

1	we want to work with the residents, we want
2	to be a good neighbor. Anything that comes
3	up or has any concerns, we'll be happy to
4	meet with them right away. If the town
5	board wants to come in and give them an
6	update on any town board meeting, people
7	from MCC will be here and discuss it and
8	provide answers. Thank you.
9	Do we have anybody else? I think
10	we're good. We have people here that can
11	answer questions if you have any on some of
12	those other issues. Thank you.
13	MR. PARMENTIER: So let's do this:
14	We have the sign-in sheet here. It still
15	only has four names on it. We can take a
16	little pause. Are there people who want to
17	get added to the list?
18	UNIDENTIFIED SPEAKER: My question is
19	do you have to sign that.
20	MR. PARMENTIER: In order to speak?
21	UNIDENTIFIED SPEAKER: Yes.
22	MR. PARMENTIER: Yeah.
23	UNIDENTIFIED SPEAKER: By law?
24	MR. PARMENTIER: You want to speak
25	but you don't want to sign it?

1	UNIDENTIFIED SPEAKER: Well, I'm just
2	saying.
3	MR. PARMENTIER: It's just to keep
4	people
5	UNIDENTIFIED SPEAKER: There are some
6	people that might don't want to sign,
7	that want to remain anonymous.
8	MR. PARMENTIER: If you guys don't
9	mind, just put down something that indicates
10	that it's you, so that we can go down the
11	line. Call yourself Person X or something.
12	Just get on the line. That way we can go in
13	order.
14	MR. SWEENEY: Matt, just a question
15	on that?
16	MR. PARMENTIER: Sure.
17	MR. SWEENEY: Is it possible, if they
18	were anonymous, we know that they're, you
19	know, not from Mars, they're at least where
20	they're from, if they could add that, by
21	chance?
22	MR. PARMENTIER: Yeah, if you're
23	willing to add that you're not from Mars,
24	that would be helpful. So if you do want to
25	get added or maybe we just circulate it.

1 We can take a little five-minute break. 2 MS. NEUENFELDT: That would be fine. 3 MR. PARMENTIER: Send it through, put 4 something down so that we can call on you. 5 I don't care if it's your name or not your I just want everyone to get a chance 6 7 to talk if they want to talk. 8 MS. NEUENFELDT: The point is more 9 for just to help keep us in order so that 10 with can keep one, two, three, more than anything else. 11 12 MR. PARMENTIER: Should we go off the record for a minute? 13 14 MS. NEUENFELDT: Sure. 15 MR. PARMENTIER: All right. 16 (Brief recess taken.) 17 MR. PARMENTIER: All right, 18 everybody, we're official again, back on our 19 record. So our two chairmen have a sign-in 20 sheet, and they will work their way down the 21 list and call on folks. If you have things 22 to present and you want a table, you can 23 come up to the table. If you don't, you can 24 talk from where you are, just make sure you 25 stand up and you're loud enough so that

everybody can hear you.

MR. HAMBLIN: All right. First on the sign-up sheet is -- and I apologize if I murder anyone's last name -- Tim Manion from Hortonia.

MR. MANION: Yes. I'd like to -before I speak, I'd like to introduce a
special guest, State Representative Elijah
Behnke. He'd like to just address the crowd
and say hello and say a few words.

MR. BEHNKE: Hey guys. With the new maps, I'll be your neighboring state rep. So this used to be like the Sixth District, but they shoved Outagamie County out of the district and included Oconto County, which is where I'm from. So just a rural guy from a very small town of 1,500, so I'd like to be a state rep that actually cares about the little guy not being shoved around. here to listen, observe, and it's obviously a tension of two wants and needs, but I'm here to hopefully, you know, learn what you guys are so concerned about.

MR. HAMBLIN: Tim, before you begin,

I have a quick question for the attorney.

1 Is there any issues with time limits that we have to worry about? 2 3 MR. PARMENTIER: Nope. They get 4 whatever time they need. 5 MR. HAMBLIN: Okay. Just checking. 6 MR. MANION: Good evening, everybody. 7 My name is Tim Manion, for those of you who 8 don't recognize me because I don't have 9 hunting clothes on today. But it's great to be here to address this situation with MCC 10 11 and our community. 12 I am the co-chairman, along with Dan Mercer, for the Citizens for the 13 14 Preservation of Hort, Hortonia. We were 15 involved with the situation with the 16 Hortonia prison. Took us seven months to address that and reverse the decision. 17 This 18 is not the prison problem. It's worse. Ιn 19 our view, it's worse because it's right in 20 our face, it's right in our backyard, it 21 really impacts so many things that I'll get 22 into in just a minute. 23 But 37 years ago, we were driving 24 down Givens Road looking for a lot to build

a house, and we saw a little sign that said

quarry, and, you know, I thought, well, that must be like Redgranite quarry or the sand pits, you know, it's a place to swim.

That'll be fun, that'll be great. And an attorney friend of mine said, well, quarries have a lifespan. They have a beginning, they have a life, and then they have reclamation, they have an end.

22

23

24

25

But this quarry, the existing quarry, has been here for 60 years, owned by MCC and Black Creek Stone. Great companies, great corporations, they make a lot of money, but they really have provided very little goodwill to the community and their neighbors. We are their neighbors. of us built a garage across the property line, or had a junkyard in your yard, it would be immediately addressed by the Town Board, and you'd have to remove it, you'd have to do something about it. In this case, in February the quarry feverishly started building the berm without permission, without a permit, and it's 50 feet from the center of the road, when the ordinances require them, if they're

permitted, to be 150 feet back.

19

20

21

22

23

24

25

So that was in our face. That was, we're MCC Quarry, we're used to not being accountable to anybody, and we're gonna do what we want. And at this point, March 20th, in the meeting, the attorneys said, we're here to be good neighbors, we're here to answer your questions. And, you know, it just doesn't happen.

I sent a letter to Todd Vande Hei, who I know personally, and I said, Todd, how about a tour of the quarry. No response. Ι sent a letter to Michelle Sasman inquiring whether or not they had a conditional use permit, and no response. And then September 11th I received a letter, and so did Mr. Mercer, from the Axley attorneys with veiled threats: We have looked at your Facebook page, we don't like what you're saying, some of it's inaccurate. The last sentence is: You are respectfully requested to reconsider maintaining those postings on this page.

Is that a good corporate citizen? Is that a good neighbor? Not in my mind.

That's a mistake. I'm not intimidated, I'm angry, because this corporation is interested in making money on the backs of this community without consideration for a lot of different factors.

I have a question. I think it was stated that the elevation at the entrance is 840 feet? I don't know if that's correct. But my question is, how much of the quarry has been quarried to 840 feet at this point? The second comment is that that was a very good, compelling speech about appraisals and real estate, but that's before the second quarry or the expansion.

What I'd like to know is when does the reclamation start on the existing quarry if they're at 840 feet elevation? That's when they're required to kick in and start reclaiming some of that land. I haven't seen it happen. So if they're still taking materials out of it, why do they need a second quarry? This is covered in the MCC reclamation plan of 2004, document two. I don't know if you have a copy of that or not, but...

1	MR. PARMENTIER: What was it? Sorry.
2	Tim, what was that one?
3	MR. MANION: It's called the MCC
4	Reclamation Plan 2004.
5	MR. PARMENTIER: Was that part of the
6	application? Sorry to interrupt.
7	MS. COURTER: This is.
8	MR. MANION: No, that's the original
9	one.
10	MR. PARMENTIER: Tim, if you want to
11	include anything when you're done
12	MR. MANION: Sure.
13	MR. PARMENTIER: in the pile,
14	you're welcome to do that.
15	MR. MANION: Point four. As portions
16	of the quarry are depleted and mineral
17	resources are no longer used for stockpiling
18	or other quarry-related activities, these
19	areas shall be incrementally reclaimed as
20	wildlife habitat.
21	Now, a couple things happened during
22	my research. I found that we cannot locate
23	a conditional use permit for MCC for the
24	existing quarry. I asked Michelle Sasman.
25	No response. The Board can't find it.

Scott Konkle from the East Central Planning says, I can't find it. So if there's no conditional use permit for the existing quarry, they're either operating illegally and blasting, or -- it's a catch-22. Either they're -- they don't have a permit, and if they do, according to the 2004 -- two thousand, actually, ordinances in the Town, no conditional use permit shall be issued for a period exceeding eight years, consisting of not more than six years for the operational phase, and not more than two years for restoration. It's either one of the other. And I have no evidence that there is an conditional use permit, but yet here you are, applying for a second one for an expansion.

22

23

24

25

I had some very interesting reading today. I read the 209 pages of the comprehensive land plan. Very interesting, titillating reading. One of the things that stood out for me was what do Hortonia residents value? In 209 pages, I never saw anything about MCC. The only thing I saw in there was MCC needs accountability on

reclamation.

1

2

15

16

17

18

19

20

21

22

23

24

25

What do Hortonia residents value?

The peaceful country, rural setting,

wonderful natural resources, abundant

wildlife, low crime rate, proximity to

Fox Cities, lots of open green spaces,

reasonable tax rates, historic town hall,

clean country air, et cetera. Nothing about

desiring a mega quarry.

Now, one of the requirements for the quarry overlay, as a part of the 2020 ordinances, are it needs to preserve the rural character and natural beauty of the And your [sic] question to you, does town. MCC do that with the expansion of this quarry? Has to provide for the safety of town residents, encourage the most appropriate use of the land, minimize the impact to the public and the environment resulting from nonmetallic mining operations, protect and preserve surface and ground water, wildlife habitat, and open space. Those are the questions we have to answer, does it do that.

One of the things -- one of the

1 reports that I have here is the comparison 2 of farm use versus mining use. If you look 3 at 40 acres of that new parcel, you need 4 five pieces of equipment to do farming, to 5 farm for soybeans and corn. And doing 6 mining, use 25 pieces of equipment. 7 one year's time, a tractor and doing farming 8 is -- let's gather this here. Farming is 9 32 hours a year, and mining is 3,250 hours a 10 So imagine the noise difference in 11 the equation of different pieces of 12 equipment; dozers, scrapers, excavators, 13 drill rigs, crushing units, screening units. 14 If they're making dolomite, they're going to 15 be crushing and making noise all the time. 16 And we're going to have a mega quarry. 17 Instead of 257 acres, we're going to have 18 another 114 acres that will be a mega 19 It's not what the town needs. quarry. 20 Now let's talk about value, property 21 value. This is after the expansion.

Now let's talk about value, property value. This is after the expansion. I have a letter here from an appraiser who says that he was contacted by me individually and WP Farms, Outagamie County, which I own, to provide a market analysis and -- on the six

22

23

24

25

parcels on Givens Road and my home.

And I'll give a copy to you, but what it says is: This perception and information may cause the home to sell for discounted amount of 10 to 20 percent or not sell at all. If a second quarry were to be constructed with the active existing quarry, the home would have difficulty in its selling, as now Hortonia would be known as an industrial quarry town. Shady Acre Drive and the Manion home, if sold, may incur a 20 to 30 percent loss.

I have -- I own the 75 acres across from MCC, it's zoned residential, and I bought it to keep it in green space. But eventually that'll be sold to somebody as a developer, and the developers I've talked to, they've said, you know what, the perception is greater than reality. If people perceive that that's a quarry town, and it's always loud, and things are going on, they're not even going to look at the community. So I stand to lose millions of dollars on the potential of development for 75 acres and 120 on TT, 200 acres of land

that is really the growth area for part of the town.

1

2

3

4

5

6

7

8

9

10

11

12

13

14

15

16

17

18

19

20

21

22

23

24

25

Now, I have been a -- working with Green Lake Association, Green Lake Conservancy, and the sanitary district, and they've gone through a similar situation. They had a mining company, Kinas, K-I-N-A-S, come in, and they proposed to open a mine, and it went through the process, went through the town board. The town board actually gave them a permit, and everybody was so enraged that they hired a law firm out of Madison, your competitors, and they had several different studies and evaluations. And their study as well -let's see, it's a 27-page study -- indicates that the properties in proximity, or close to the quarry, would include incur a 25 percent reduction in value. And those are the ones, like us on Shady Acre Drive, on Givens Road, Deer Brook.

And the final opinion of the lawyers came back, and they really looked at this from the standpoint if MCC satisfied all of the questions on whether or not this would

damage property, if it would impact the water quality, would it impact the quality of life, and their summation was the proposal lacks substantial evidence that will have a negative impact and effect on the health, safety, and general welfare of occupants of surrounding lands.

1

2

3

4

5

6

7

8

9

10

11

12

13

14

15

16

17

18

19

20

21

22

23

24

25

They also said the proposal lacks substantial evidence that it'll not be hazardous or disturbing to existing or future neighborhood. The proposal lacks substantial evidence that it will not be detrimental to property in the immediate vicinity or the community as a whole. mine will have immediate and significant detrimental effects on the surrounding properties, diminishing their market values and severely reducing the landowners' use and enjoyment of their property. Well-known impacts of mining operations to nearby properties includes noise pollution, dust from blasting, crushing, hauling, heavy traffic, decreased wildlife, disrupted service, and ground flow. Studies show that residents within one-half mile of a mine

experience drop in market values of 25 percent.

Now, you know, we have talked to and about -- MCC about the importance of reclamation, and in the last August 20th meeting, the attorney said, well, we don't -- they don't really have to do reclamation. Well, of course they do. But you know why they don't? The actual cost to restore an acre is \$72,425. Now, what they're insured for and what the industry is insured for is more like three or four thousand an acre. Well, you can't take an acre of land that's all rock and sediment, put fill soil on it and put topsoil on it and seed it for \$4,000.00.

I think I said a little while ago that I own WP Farms. I actually own multiple farms in four counties, and so I look at land every day, I look at the value, we're acquiring more land, and it's very expensive to regenerate soil.

Now, one of the things that we haven't talked about is this location right here of this proposed expansion. This is an

important rural district in farmland, and it's also a wildlife corridor, that all the wildlife from the river bottoms come through this area into these other properties and enhance the quality of life for the entire neighborhood.

MCC has not provided proof that the mine will not lower the property values and physical structure of real estate of Hortonia, will not damage and affect ground water of wells. MCC will destroy important farmland in an environmental corridor by expanding the quarry. The expansion will negatively impact the neighbors' quality of life. The entire community.

This is the time for us to look, as a community, how we want the future of Hortonia to look like. Do we want to look -- do we want to live in a community enjoyed for future generations to where it's going to be an industrial town or with a mega quarry? Or are we interested in maintaining the idyllic countryside town with an open field, woods, wildlife, and clean air?

My suggestion is that MCC look for an

1	alternative site for quarry expansion,
2	because the residents here do not want it.
3	I would request, on behalf of the Citizens
4	for the Preservation of Hortonia, that MCC
5	be denied a conditional use permit, zoning
6	change, and amendment to the town
7	comprehensive plan. Thank you very much.
8	MR. PARMENTIER: So while you're
9	packing things up, Tim, if you want any of
10	that to be part of the record,
11	MR. MANION: Sure. Yeah.
12	MR. PARMENTIER: we'll take it and
13	I can mark it.
14	MR. MANION: We've got to make some
15	copies, I think. It's all numbered right
16	now. You want to just figure out what
17	MS. NEUENFELDT: Yeah, that's good.
18	I think if you want to leave it with us,
19	then we can copy we can make a copy and
20	give it back to you.
21	MR. MANION: Okay. Why don't I do
22	that. I'll take my notes off here.
23	MS. NEUENFELDT: As long as it gets
24	entered.
25	MR. MANION: Yeah, that would be good.
	56

There you go. Have fun.

MS. NEUENFELDT: Thank you.

MR. HAMBLIN: Next up to speak is Ryan Clark.

MR. CLARK: Yes. So I'm Ryan Clark. I live on Givens Road, pretty much directly across from the new expansion, so just a little west of Shady Acres, and I'm probably going to be one of the most impacted by this expansion, so I have some concerns. I've lived here for four-and-a-half years, and when I bought this home, was real excited about it, and still am, but in a way, there's some concerns that I have with the quarry.

When I bought the house, it was -- I understand, you know, the goods of quarry, and I'm not anti-business or anything, but -- and the people with MCC have worked with me and have been nice. But that's not the point that I'm trying to make with my home and the effects that the blasting has on it and -- you know, you could -- I'd welcome any one of you guys to sit in my house when the blasting happens. And the reality is,

is it impacts our qualify of life. I have two daughters at the home, a wife, I -- you know, I've had things rattle right off my table when the blasting happens. MCC has been taking care of the measurements, the seismographs get reported to me, I understand what I'm reading and I understand what I'm looking at, but the reality is, is the impact is great for us.

25

The noise levels are high. We hear conveyer systems running, you know, at dark hours of the day. We hear, you know, backup alarms from the equipment. We hear, you know, a lot of this kind of noise that we didn't really buy into when we bought this house. Nobody told me that. That wasn't -if it was such a great thing, it wasn't definitely marketed that way to us. matter of fact, we didn't really -- I knew there was a quarry, but I didn't know how active it was and what it felt like to be in that home, because the realtor didn't want to tell me that. Nobody wanted to tell me that. So we found out later.

And so my concern -- I appreciate the

1	appraisal, you know, I appreciate the
2	perspective in appraiser and
3	environmentalist, but my concern is going
4	forward. I'm already used to what's going
5	on now, but this whole new expansion is just
6	going to change things greatly for us and I
7	think everybody in Shady Acres. So thank
8	you.
9	MR. HAMBLIN: Thank you.
10	MR. MANION: May I? Could I say one
11	more thing?
12	MR. PARMENTIER: Yeah. Just a point
13	of order? Yeah, go ahead. Oh, you want to
14	talk again?
15	MR. MANION: I want to just finish a
16	thought that I had.
17	MR. HAMBLIN: Sure. Go ahead. Yeah,
18	absolutely.
19	MR. MANION: What I didn't what I
20	didn't share with you, as a final part of
21	that report, is that the board of adjustment
22	with the law firm overruled and reversed the
23	decision for the conditional use permit for
24	the Green Lake area.
25	MR. HAMBLIN: All right.

1 MR. MANION: Thank you. Thank you, Tim. 2 MR. HAMBLIN: Next 3 to speak is David Viaene. 4 MR. VIAENE: Viaene. 5 MR. HAMBLIN: Sorry about that. 6 MR. VIAENE: This is my property 7 Right? We're right here. Geologist? 8 coming this way. Well, I can tell you right 9 now, without this expansion, this shit has 10 been devastating to my house. We've had 11 shit fall off the wall, and everybody here 12 in this board knows there's issues. There's 13 issues with the people that live around this 14 quarry. Lyn, my wife and I called you more 15 than once because the blasting was 16 devastating, especially when this road was 17 going on out here. 0kay? 18 And Mister Appraiser? I bought 750 19 properties in 35 years. I bought them and I 20 sold them. You know how many realtors I've 21 dealt with? And Ryan, it is? Do you think 22 there's a realtor that's going to go tell 23 somebody, when there's a place for sale 24 around this quarry, you better watch out,

they blast it, beat hell, your shit will

fall off the walls? No. The answer's no.

That's why the values stay up. But they get in their house like Ryan, and they want to leave. Okay? That's something you don't know and you bluff these people. Okay?

This is going to do absolutely no good for this town. And Matt, I don't know -- I'm sure they've got -- you know, they got the right to go apply and do all these applications and all this stuff, I mean that's a legal right for everybody to do. And I don't know how to stop it, but I just know that everybody here knows it, and we all know this, and there's a lot of people in here that know, that this is going to make it worse for our town.

Now, our geologist stood up here, told everybody how great MCC -- if you got a problem, you know, they come out, they'll plow the snow, I heard her say they'll talk to you, they'll do this, they'll do that. When we talked to Lyn, and I told her this, my wife and I were on the speakerphone with her, I -- because my wife was so upset about it. She said, we've called MCC, and my wife

had called several times, to get hung up on.

So I'm not sure if you know who you're

dealing with, because they might not be

telling you the truth, or you.

1

19

20

21

22

23

24

25

But if we go approve this, I'm very close to being on the list. I've had several discussions with my attorney already, and they're coming my way. I don't want this town and have this be considered negligence, because everybody knows it right here, that Right now. we got issues. Not later. Everybody knows it. Why would we -- my question is why would we go and take residential lots and go give this to the quarry, when they're -- and they're already -- it's already devastation for people that live around it. He doesn't live around it, you don't live around the quarry, and you've never experienced it. But we have, I have, Ryan has, Tim has. We know.

And I'm just worried, because I think there's going to be some -- you know what, and I don't want the town to fall into it and all of a sudden have liability issues right along with the quarry. The time to

say no is before it's -- we're too deep.

This won't be -- this won't be doing anybody any good in our town, the majority of people.

It's great for the quarry, of course, you got a whole list of businesses. Shit, they're making money off it. Absolutely. What about the folks in the town? What about us? I just want -- I hope that we go and we get some reality and we think about this. I mean, you know, I know we gotta go follow all the laws and all this stuff. If we could live by the law in the jungle, the answer's no today.

MR. HAMBLIN: Next to speak is Dan Mercer.

MR. MERCER: Thank you. I'm Dan

Mercer. As Tim had said, I'm also one of
the co-chairmen for Citizens for the

Preservation of Hortonia. The morning after
we met with the Department of Corrections, I
was at Tim's front door and said, Tim, we
need to do something. The best thing that
we can do as a small community like this is
to start a grassroots effort. And that's

exactly what we did. We went out and we've got, I think it was close to 3,000 people out of a town of 1,100 [sic] to sign a petition that they didn't want the prison.

1

22

23

24

25

And I know we're not here to talk about the prison, but I want to talk about grassroots and I want to talk about this community. We put the signs out, we got coverage, we got everybody on our side, and we won, because the big guy doesn't have to come in just because they have the money and they can afford all the attorneys and they can stall until they get what they want, because we are the citizens of this community, it is our home, and we are the ones that can speak out and say, no, we don't want it. This board, or these boards, are representatives of us. They are elected or appointed to speak for us. They're not making decisions on their own. They're making decisions based on what we ask them to do.

Now, I was also a board member. I have had the pleasure of reading that comprehensive plan, and I was really taken,

for one thing, the amount of effort and the amount of time that went into creating that And I really do encourage you, as a plan. citizen of Hortonia, to maybe not read it word for word, but go look at it and see what the vision -- because that's exactly That's our vision. what that is. they surveyed the citizens of the town and they said, what do you want Hortonia to be going up to 2035, is it? '36? MS. NEUENFELDT: Mm-hmm. MR. MERCER: And we overwhelmingly

23

24

25

said we want this to be a rural community, agriculturally and residentially based. There's nothing in there that says we want industry. The industry's around us. We can drive to the industry. It didn't say that we wanted to turn every farm field into row housing, like we have in Greenville now, with houses that look identical for miles on end. We wanted Hortonia to have its own character. That's what we have.

Now, I would like some clarification on this map. We've talked about the existing parcel and the -- this should say

65

That's --

1 proposed parcels. Where is the overlay from the comprehensive plan? What is -- what 2 3 area is covered by the overlay that we heard Can anybody answer that? 4 about? 5 I'll put it on my MR. PARMENTIER: 6 list and then we can do it at the end. 7 MR. MERCER: That'd be Okay. 8 wonderful. Because it'd be very interesting 9 to see what the vision for our community, 10 our comprehensive plan had, knowing we --11 yeah, we had a quarry here. We already had 12 It's been here. And what was our a quarry. 13 vision for the growth? Because, yeah, it's 14 -- we expected growth. What's the vision 15 for that growth? I can guarantee you that 16 it doesn't cover all this land. This is 17 agriculture. Why are we getting rid of 18 agricultural land? You can't make it back. 19 This is residential. Why on earth would we 20 take residential and turn it into a buffer 21 to hide this? 22 So Hortonia, the ball's in our court. 23 We are the ones that have the responsibility 24 to make this group know that we do not want

this in our town.

25

66

Thank you.

1 MR. HAMBLIN: Next to speak is Nate Waldvogel. 2 3 MR. WALDVOGEL: Hello, everyone. 4 looking at this map here, you stated that 5 you're a sales -- a real estate person. 6 MS. COURTER: Geologist. 7 MR. WALDVOGEL: Now -- no, not you. 8 So you pointed at my property. I live right 9 down here on Shady Acre. Yeah, I bought my 10 house for two sixty-three five, and Zillow 11 says it's worth 450,000 today. You are out 12 of your goddamn mind if you think my 13 property is worth that. There is no reason 14 that house is worth that. It's wav less. 15 When I bought this house, I bought it 16 because I liked the peaceful area of it. Ι 17 liked the neighbors. It was gorgeous. 18 Beautiful property. But I own my own 19 business. My wife stays at home and does 20 all the paperwork. There are times where my 21 two kids and my two dogs get freaked out by 22 Now, as this expands, where this blasting. 23 does it get? It gets closer. 24 You especially. You're over here. 25 You think you're getting it bad now? You're 67 only going to get more. So any damages are

1

13

14

15

16

17

18

19

20

21

22

23

24

25

Now, as a geologist you say this rock is so great. I've bought that limestone.

It's junk. It falls apart. It's terrible.

I mean, I'd rather buy the lime -- or the gravel from the Mackville area. That's much stronger, much better.

But there's a house over there. Ι don't know if anybody of you have seen it. If you're heading north from Appleton on County Road A by the Country Bar, just southeast side of where the Country Bar is located, there's a couple residential I just looked on Zillow right now. They're saying those houses are worth \$455,000.00 on Zillow. I remember years ago driving my truck past there every day, and I always said I would never buy a house there. You'd be out of your goddamn mind. distance is under 700 feet from their back door of their house to the quarry. 455,000 for a house that overlooks a big quarry? No. Not happening.

And MCC has said they would always

try to do stuff in good faith. Well, honestly, there's no state law that stops them from operating 24/7, so they might say good faith, but, you know, it's kind of annoying when I'm sitting out on my back porch trying to have a barbecue at 6:30, seven o'clock at night when I got done with work, and I hear crap going on all the time. Come home from lunch once in a while, you know, might be 10:00, 11 o'clock, and all of a sudden the whole fucking house rattles. It sucks. It's not fun. And there's no way the property value of my house right here is worth what Zillow's saying.

22

23

24

25

You need to retire or you need to start talking to people that live directly here and get their direct opinion. You're using data, but you're not using the people that live super close. You said somebody right up in here in this neck of the woods bought a house? Must be nice. Because you know what? All the blasting is calming down as time goes, because the quarry's going this way, it's going away from them. What do they care? They don't feel it more?

1 We're the ones feeling it more and more. 2 Now, if MCC wants to really do 3 something, then be more honest, be more 4 upfront, create more hours of operations. 5 Maybe calm things down. But we haven't 6 heard nothing -- none of that. Nothing. 7 All we've been hearing is just sweet 8 whispers of nothing in our ear. And that's 9 all I got to say about that. 10 I'm not against MCC. I get it, it's 11 business, you need the gravel, but MCC 12 should really do more for the community, of all these -- of all these people that live 13 14 in that close proximity, and as they move 15 forward, what their plan is to make a living 16 -- you know, everybody's lifestyle better. 17 But it doesn't seem like that's going to 18 happen, and that's what I'm worried about. 19 And that's all I have to say. 20 MR. HAMBLIN: Next to speak on the 21 list is Polly McHugh. 22 MS. McHUGH: Hi. It's actually 23 Dolly. 24 MR. HAMBLIN: Oh, I'm sorry. Ηi, 25 Dolly. 70 MS. McHUGH: Anyway, this is really.

(Brief discussion off the record.)

20

21

22

23

24

25

MS. McHUGH: I live on Everts Lane, and it's a little bit further south from the quarry. We built the house I think like 42 We had to dynamite our basement years ago. in because we had rock ledge in the area where we were originally going to build, so then we moved to another spot and ended up dynamiting it. So we had the walls poured, and foundation, everything was poured, and lo and behold, there was some blasting, and it wasn't long and we had cracks in our walls, cracks on the cement floor, and it just continues to get worse. And I can feel the house kind of moving; not huge, but you can tell it's like a little tremor when the blasting. It scares my animals, and I'm not even across the street or next door.

So it's real. It's there. And I can't help but think, you know, the cracks that I've tried to have repaired that just keep re-opening on the foundation of the house are going to drop the value if I decide to sell. That's all I have to say.

MR. HAMBLIN: Next to -- oh, boy -- speak is Brian? Brian.

"BRIAN": And Valerie.

MR. HAMBLIN: And Valerie? Thank you.

"VALERIE": I don't know that we have a ton to add. We're a little bit from the quarry too, but I think that it's important that the more neighbors that you hear from to kind of send the same message, the better. Again, I don't need to reiterate, but I agree with everything that our neighbors have said.

"BRIAN": My concern might be a little bit different than my wife's, but... So we have this blasting, and we are considerably a distance from it. Our property resides right here, and I know a lot of the activity's going on here. We feel the blasts all the way down to our property. My concerns -- I'm not against it, but my concerns are, when the blast happens, what happens if my cattle get out? Who's paying for that \$5,000 cow? Who's paying for the \$10,000 car that hit it?

Who's going to put the fence back up? If you blast and blast, you hit a vein, what happens to my well?

22

23

24

25

There's just a few concerns I have, and there's no -- there's no plan for it. You know, blasting, the house shakes, my foundation goes, there's cracks, we have water coming in the basement. Who's fixing that? We live on the north end of the ledge. Water runs down. Every year, snow melts, we got a river in our yard. foundation takes a crap, I got a flooded basement. Just things that I want everybody to be aware of and... I'm not against it, but I think we need to slow it down or do something to come up with a better plan.

MR. HAMBLIN: Next to speak is Al Neuenfeldt.

MR. NEUENFELDT: Hi. I just have a brief comment. I dealt with Murphy probably for 50 years that we were in business, but the mentality at -- the people themselves that work at Murphy's are good people, but I think the mentality of the ownership of the -- of quarry Murphy, MCC, if you compare

Asphalt, and they have a pit on -- Murphy has a pit on Highway 96 east of Medina, and if you go right across the road, Trico Excavating has a -- they have a pit in there, sand pit, and they filled it in. But if you look at Bill Rathsack's maintenance of his berm, if you go across the road and you look at the maintenance of Murphy's berms, they're all trees, just like they are on Givens Road.

So if you want to be a good operator, I think it starts with stuff like that, keeping up your berms and respecting the people that live around it, not -- Murphy's -- or Michels, Northeast Asphalt, they don't operate 24 hours a day. They have a set time that they can operate and blast, and they do that to be a good neighbor, and I think that that's what Michels -- Murphy's has got to take into consideration when they operate, if they want to be a good neighbor.

MR. HAMBLIN: Last to speak is Keith Dobberstein.

MR. DOBBERSTEIN: Well, I'm down at

1	the intersection of Givens and Winchester,
2	so I'm not nearly as affected by the concerns
3	that the other speakers have had. I just
4	from a personal standpoint, I have almost
5	I am concerned about the possibility that
6	sometime in the future we may have another
7	meeting about whether Givens is going to be
8	used for access. I mean, that would affect
9	everyone along Givens down to 15. Thanks.
10	MR. PARMENTIER: Did you say that
11	that's the last one?
12	MR. HAMBLIN: That's the last one,
13	yep.
14	MR. PARMENTIER: We won't talk by
15	show of hands, but do we need to circulate
16	the list anymore, or has everybody who
17	wanted to talk had a chance to talk? I
18	don't see any hands. I see a hand. Okay.
19	If there's more than just you, we'll do a
20	list. If it's just you, then you want to
21	call him again?
22	MR. HAMBLIN: Who was that again?
23	I'm sorry.
24	MR. WALDVOGEL: Nathan.
25	MR. HAMBLIN: Okay.
	1

1 MR. WALDVOGEL: Am I allowed to ask 2 questions of everybody? 3 MR. PARMENTIER: If you have 4 questions, we'll write them down and then 5 they'll answer them. Questions for those 6 guys? 7 MR. WALDVOGEL: No. The residents. 8 MR. PARMENTIER: Ask them, but they 9 won't be able to answer them. No, that's fine. 10 MR. WALDVOGEL: A11 11 Residents of Hortonia, who thinks right. 12 that their property value is going to drop 13 because of this expansion? And if you think 14 that our home values won't drop, it's 15 That's going to greatly affect me. 16 I'm not -- I'm not retired yet. I'd like to 17 sell my house at some point to make a 18 profit, break even. I don't -- I don't know 19 if I can. 20 You know, the last meeting that we 21 had early this spring, you know, we talked 22 about, you know, the berm, make it look It just 23 better, and nothing happened there. 24 sat there and died. The reclamation, like 25 Tim said, I mean, there's so much of that

area that nothing's ever been touched with.

When is reclamation ever going to start, if
it ever does? That's my biggest concern.

You know, there's a lot of other concerns. I think more people need to stand up and just say it. You know, don't be afraid of, you know, retaliation from MCC or the Board. That's one thing I gotta say to everybody. Might be small, but it could become very important down the road.

MR. PARMENTIER: I see another hand.

Are there going to be more? Because we'll

do a sign-in sheet. Otherwise, I see Tim.

MR. HAMBLIN: Tim Manion.

MR. MANION: Nate had touched on the element of reclamation, and I've asked questions about it in the past. According to the Town ordinances, you know, which they had to abide by when they got their reclamation plan approved -- by the way, that reclamation plan was approved along with the conditional use permit. And if the conditional use permit was not issued, then, again, it's a catch-22.

My question is this: You had

1 referenced that the elevation is 840 feet at 2 the entrance on Highway 45, and I'm 3 wondering how much more of the excavated-out quarry, the existing quarry, is at 840 feet. 4 5 If it's there, the question really is, are 6 you going to reclaim that area or just keep 7 moving materials around to say that you're 8 using it? Because that's really what's 9 happening. The only complaint I ever had 10 with MCC was, because I own the land across 11 the road on Givens Road, is the sand pile 12 was above the tree line, and one winter, the 13 entire road was brown, the sand was blowing 14 into my pines, and I talked to them, and they said, well, usually we water that and 15 16 ice it down, but the hoses broke. So, you 17 know, back to the goodwill. 18 But really, there's a life span.

But really, there's a life span.

When does the reclamation start, and what is the timetable, what's the game plan? This is something that this Town Board and this community needs to know. My question is how much more of it is at 840? Thank you.

19

20

21

22

23

24

25

MR. PARMENTIER: All right. Do we need a break?

1 (Brief discussion off the record.) 2 MR. PARMENTIER: Thanks everyone. 3 Then as we talked about earlier, we'll give 4 MCC the last word. I have a list of the 5 questions that I heard. You guys hopefully 6 wrote some of those down as well. If you 7 don't touch on the things that I wrote down, 8 I'll ask, but the floor is yours first. So 9 go ahead, and then we'll adjourn for the 10 night. 11 MS. SWEENEY: So, Mark, do you want 12 to talk about the reclamation, or Sue, do 13 you want --14 MS. COURTER: I have a couple things. 15 Are we taking a break or are we just --16 No, we're going right MR. SWEENEY: 17 now. 18 MS. COURTER: Okay, we're going. 19 Okay. Okay. Thank you. And I don't know 20 that I can answer all of the questions. 21 don't have access to -- right now, to the 22 map overlay district, but I just want to 23 thank everyone for coming and their 24 comments, first and foremost. I can tell

that people care a great deal about their

community, and I like to see that -- people working out, and even bringing up challenges like, hey, this wasn't resolved, I'm worried about what's happening with the berm.

And I share that concern. That needs to be planted, right? There's -- like what is the process for getting that outside of this application, what's going to happen with that? It's planting season, we don't have a lot more time to do that. So a lot of good comments raised.

One thing I want to talk about or just mention was the -- you know, the complaint mechanism that I need to go back to MCC, like the process of, you know, getting these comments and processing them, the quarries that I've worked with, if there's a blasting concern, we -- it is researched, or a water concern, or air quality concern. So I think because this could be a grandfathered quarry, that maybe -- you know, this is not really captured well, but I feel like -- like there's some unresolved concerns and there should be a grievance mechanism, like what is the

process and how is the Town involved with that.

And then to your comments. So this is like my experience, and I want to let you know that when there is a concern about reclamation or waters or blasting, you know, there's licensed people that investigate that in cooperation, whether it's the DNR or the Department of Commerce or whatever these agencies are, that you should not be alone and the Town shouldn't be alone, because they're not always experts in all of these areas. So I just want to make sure that -- I think that -- I don't -- I just want to capture that as my biggest takeaway on this, because, you know, blasting is predictable.

And I actually took a look at this.

I'm not a blaster. Maybe the blaster guy is going to answer some questions. I don't have them. But I looked at the blasting vibration compared to state limits. And I'm not saying that you're not feeling it. I feel it when I'm in a house, especially on a cloudy day. I can feel it, it sounded like rocks stomping together, what was that. So

I know that you can feel it. Okay?

1

2

3

19

20

21

22

23

24

25

But there's a process of knowing if there's damage or if there's some, you know, consequence of blasting. But at the limits that they are -- and this is, you know, hardwired, they have equipment and they can't tamper with it, of measuring the blasting vibration. But this is like their average blasting vibration at the New London quarry, and this was from 2019 to May of 2024. So it's not every single, you know, year, but this is the comparison to the blasting vibration limit, which doesn't equate to how you feel it, because I can feel my cell phone vibrating in the next But, you know, you do have vibration, room. and there's a guy, the blaster here is licensed.

So I just want to, you know, make sure that there's systems in place, no matter what, if there's a permit or not a permit, that we have this process for managing it, you know, and understanding what that is.

So the other questions that came up,

I -- the 840. Okay. Elevation and reclamation, that might be better -- from the reclamation, like when is reclamation gonna happen? Okay. Well, it's usually based on demand. If we're still using the quarry, it's still being operated, okay, and there's more than one business that's functioning in there, based on my understanding.

But here's the entrance drive, it's an elevation of 840 right here, and the reclamation -- did I print that one here? Did I print that one? The reclamation -the baseline excavation for this area is 840 as well. So they drive in here and it will be the bottom of the quarry here. So they are still extracting around the perimeter of what's, you know, allowed, and to those elevations. And if you want more specific information, you know, I guess that's going to be, you know, more specific questions on how that goes. Am I answering that -anything else you guys want to add?

MR. KRUMENACHER: Well, I can add.

Mark Krume nacher, K-R-U-M-E-N-A-C-H-E-R.

I'm also a geologist, hydrogeologist, about
40 years experience. And what I'll add to
the comment on elevation is you can go to
the county website, the county GIS, they
have one-foot elevation contours, so you can
see all the elevations you want on that
property. I mean, that's the way to go.

The entrance, actually the actual
entrance off of 45 when you turn into the

The entrance, actually the actual entrance off of 45 when you turn into the driveway is elevation 825. The lowest part of the quarry is about 838, 840. So that entrance is not mined, and it's lower than the deepest part of the quarry, because they're obviously mining a big hill, so... And I can respond to more comments when you're done.

MS. COURTER: Oh, go ahead.

MR. KRUMENACHER: Are you done?

MS. COURTER: Yeah, I'm done.

MR. KRUMENACHER: So as I said, I have 40 years experience as a geologist. My career the last 20, 25 years has been really with non-metallic mining all over the country, other parts of the world. I've addressed every single issue imaginable at a

quarry. I help the mining companies address the issues that folks like you bring up. So much so, I've done so much of it, I've given 50 technical presentations in the last 10, 12 years, mostly to stakeholder groups, on how to do things right. I've written multiple papers, I've even written a book on it, and --

So some of the things I've heard tonight repeatedly, one is the concept of the expansion that they're proposing here and the concept of a second quarry. It's not a second quarry. The quarry has been expanding since prior to 1938. It started in the northwest corner, and it's expanded east and it's expanded south. On the county GIS website, there are historical area photographs, and the oldest one is 1938. The quarry is here. I'm pretty sure every single person in this room bought their house, moved in here, after that quarry was in there.

So hearing all the concerns about the effects of quarrying on your life and as you feel them and see them and hear them, they

were all here before you moved here. So you've got to recognize that. I mean, they need to recognize that, like MCC needs to recognize it.

So the quarry has been expanding east and it's been expanding south. The expansion is just adding the real estate to that property ownership so they can continue to expand east and expand south to within whatever that setback is from Givens Road. So it's not a big jump, now it's a hundred-acre new quarry; it's 20, 30 feet at a time, like it has been since the '60s when they took over. So the quarry started in the '30s, but MCC has been mining it since the '60s, slowly expanding it to the east and the south. That's just going to continue.

And everybody here needs that rock.

There's comments on the comprehensive land use plan, what the citizens want. I've read dozens -- dozens -- of comprehensive land use plans. They all read exactly the same.

But they all also, most of them, will recognize the importance of recognizing the

value of the natural resources. Not just the bugs and bunny natural resources, the wetlands, the streams, the forests, the farmland, but the construction aggregate that's available to make it possible for everybody to, as somebody said, drive to the industries that are in another area. It's okay to build the industry somewhere else, just not in my backyard, but we want to be able to drive there. Well, you gotta drive there on roads, you gotta drive there on safe roads, and you want to drive there on roads that don't have potholes. You want good concrete. This stone is good concrete.

The reason that ridge is there, as you all see it coming up 45, the reason they call that rock ledge road, is because that road is so hard, even the glaciers that were a mile thick came plowing through here, couldn't knock it down. And when the glaciers melted, that rock stood behind. And so now this ridge is there, a very hard, good rock that's available. It's a very valuable resource that is important to this community. Absolutely important to this

community. That why they're mining it there.

25

You can't -- it's easy for somebody
that lives across the street to say go
somewhere else. There is nowhere else.
This rock is harder and harder and harder to
find, good-quality rock. It's here. It's
sticking up out of the ground. It's a
blessing. You gotta use it, and -- you
know, it's just the way it is. Somebody
opened up the door, at least for me, when
they said you need to face reality. Right?

Even in the book that I wrote, I commented that we need to change the curriculum at our grade schools from the three Rs to the four Rs, because only half the people in here know what the three Rs Reading, writing, arithmetic. are. Right? And we need that realty as the fourth R, so people can realize, kids can realize, where things come from. Where does concrete come from, where does asphalt come from, where does the garbage really go when we put it in the garbage can and take it down to the end of the driveway and the next day it's gone?

Where does it go? Kids don't know that, and we need to be teaching this kind of reality.

Why do they mine the rock there?

Because it's there. And ideally, and in this case is the classic example, the quarry was opened in the middle of nowhere. That's where they opened it in 1930s. Out of the city. They didn't open it right on the edge of town, they opened it out of town, because nobody wants a mine in their backyard.

So what happened over the years?

People moved to the mine. And you can see that repeatedly everywhere. It got so bad in Chicago that the open-pit mines couldn't mine any further because they're surrounded by McMansions, so they had to go underground and mine the rock that's even deeper. And now, kind of thanks to the recent pandemic and people realizing they can work from anywhere, they can work from home, they don't have to drive to an office, they can stay at home and not have to drive into the big city, then they hear the noises that are in the neighborhood, they hear the quarry, they hear that highway's loud all day, isn't

it? I didn't know that airplane had so many-- or airport had so many planes during the day.

But they also realize -- people are also realizing they can buy houses further away, in the middle of nowhere, on that -- on that back road and in that little bit of forest that they didn't realize is actually a hill of rock, and it's harder and harder for us to find land to mine rock or sand and gravel that is away from all the people, because the people are now moving further and further out to the middle of nowhere.

And Elon Musk, with this Starlink thing, has permits to put 29,000 satellites around the planet to give every person on the entire planet broadband capability, so we can call and text and surf the web and do TikToks anyplace on this planet, which makes the -- eliminates the middle of nowhere, which means it's going to be impossible to open a mine.

So as hard as it is for this group to get a permit to expand the almost 100-year-old mine, as hard as it is, and to

open a new mine in the middle of nowhere, it's never going to be easier, and it's never going to be easier than where the rock is, where the rock has been mined for a hundred years. It only makes sense to do it here.

I think that should answer almost all the -- one question on reclamation. When is it gonna happen? Reclamation's going to happen when it's appropriate. As the quarry does expand east and expands south, it does give the quarry operator breathing room. When the quarry first opens up, they have to make the stockpiles relativity small, they have to make it tight, they have to work in a tight spot. As the quarry gets bigger, they have room to relax. It's safer to have the piles a little further apart, it's safer for sorting, it just makes it more usable as a quarry.

They have to pay a fee, a reclamation financial assurance fee for every acre they have open. They have to assure the county that they have the funds to do the reclamation. It's in their best interest to

keep that open acreage as small as possible, and they know that, but they keep it in -they have to do what they have to do. So
that's when reclamation happens. But
ultimately, in the end, it's going to be
done.

25

And I think we've addressed all the comments.

MS. SWEENEY: Just two comments we didn't address. There was a question about this residential area. So everybody says, you know, there's problems here with everything else. The residential area on this side of the road doesn't make a whole lot of sense. And the reason that we want to change that is we want to put a buffer there, so that we have a buffer along Givens Road there, so -- and we want to continue that to make a nice buffer to make an area of it. So having that residential doesn't make a lot of sense. From our point of view, we want to have that buffer on it. And that's where we're coming from regarding that request.

I thought -- I thought Matt did a

good job of explaining the nonconforming use earlier, but that's not -- this whole pit is a nonconforming use pit. It was -- it started in the '30s, before there was any zoning regulations whatsoever. The new laws, I'm not sure we need a permit at this stage. That's something that we probably -- we're trying to work with the Town.

But if we don't get anything, we'll try to -- we're going the take the position that this is -- that this area here is a nonconforming use site as well, and we will go that direction. So, I mean, from -- but that's not what we want to do. We want to work with people. We want to have the nonconforming -- we want to get a conditional use permit.

People talked about hours of operation, they talked about things that can make everybody's life easier. We're open to that -- those discussions to make sure that everybody -- we minimize the impact on the residents. That's our goal. Our goal is not to make everybody's life miserable here. We think we can operate this in a manner

1	that everybody can get along. But that's
2	where we're coming from.
3	But the I just wanted to address
4	the nonconforming use, Matt, I thought you
5	handled that, but just to highlight that.
6	MR. PARMENTIER: All right. Anything
7	more from the yeah? Michelle's got one.
8	(Inaudible discussion.)
9	MS. SWEENEY: Yeah. She pointed
10	Michelle pointed out the reason we don't
11	have, you know, a conditional use permit now
12	is it's a grandfathered site. It's that
13	simple. It's that simple.
14	MR. PARMENTIER: I'm going to read
15	through my list of questions.
16	MS. SWEENEY: We have one more
17	comment.
18	UNIDENTIFIED SPEAKER: They didn't
19	answer my question.
20	MR. PARMENTIER: Yeah, I'm going to
21	read through the list of questions, because
22	I do want to make sure that all the questions
23	that got asked get answered. I don't want
24	to open it up to new ones.
25	MR. VANDE HEI: My name is Todd
	94

1 I am the current president of Vande Hei. Black Creek Limestone. One of the questions 2 3 Mr. Manion brought forth was he had contacted me, myself, Todd Vande Hei, and 4 5 personally knows me. I'd like, for the 6 record, to state I have never met Mr. Manion. 7 Today's the first day I've ever saw [sic] 8 his face. 9 MR. MANION: I was going to go in 10 business with you on a sand mine and I 11 decided --12 MR. VANDE HEI: You're talking about Todd Brockman, not Todd Vande Hei. 13 14 No. You were there with MR. MANION: 15 Todd Brockman. I met you in person. 16 MR. VANDE HEI: But I'd like to, for the record, state that. He did send an 17 18 email to me about doing a tour of the pit. 19 And if I could invoke Mike Funk, who 20 is our safety director, the reasons why we 21 don't do all of those is because there are 22 things with MSHA and OSHA, the requirements 23 that we have to do in pits, that I just 24 can't take someone around and do, you know, 25 things and that. We are glad to -- we have

board members, if they want to make an appointment or something, we're glad to do that stuff, but I can't -- because of some of the regulations, I have to be certified myself just to go into the quarries and get out of my vehicle. So some of that is addressed with that.

I'd like to make another -- answer to Mr. Viaene, because he had made a comment about his concerns. In one of these -- we brought in Mr. Viaene, I think in 2022, in one of the parcels that we're trying to get rezoned. So, I mean, there was known, I believe, I think you do, I may be wrong, that we were looking to do expansion at that point with some of that property. So I mean --

UNIDENTIFIED SPEAKER: I can comment on that when he's done.

MR. VANDE HEI: And I'm not saying you did or nothing. I'm -- all I'm saying is that was -- you know, that's what the property was intended for at that point. So I guess that's just my comment I'd like to make on that.

25

There was one other question. was a comment about the wildlife in the I used to hunt. I don't hunt area. There is wildlife in these places anvmore. that continue. You see deer sitting on the berms all day long, you see -- you know, the ponds that we have in the quarries are loaded with geese and ducks, so it's not a dead land, like some people think. it's a different -- we have people that ask to lease to the properties for hunting So there are wildlife advantages purposes. there, that -- if people are getting the understanding that this is abandoned land, it's not exactly that case. So thank you.

MR. PARMENTIER: Anything more from MCC folks?

MS. SWEENEY: No. We're good.

MR. PARMENTIER: Okay. Here's what I am going to do. I'm going to read through my list of questions to make sure that they've all been answered. If there are -- if you think that -- if anyone thinks that I missed their question that you already asked, I want to make sure it's answered.

But I don't want to open it up to new questions or comments, because that part's done. So let me run through these, and bear with me while I do this.

So the first question I have marked down, I think you responded to it, but how much of the quarry has been quarried to the 800 feet or the 840 feet. Backing up, I think you talked about that.

Next one I marked down, when does reclamation start on the existing quarry, and a related question which was something to the effect that if MCC is still taking materials out of the existing quarry, why is it necessary to do any expansion now. I don't know if you talked specifically about that, but that was one that I had.

There was a question about the quarry overlay and how it compares to the expansion parcels. It's on some of the zoning maps and the comprehensive plan maps, which we can show you. I couldn't tell you specifically right now, but we can get you that. In fact, if you stick around, I think they're on the iPad here.

1 The timeline for reclamation was the 2 other thing I had jotted down. I think you 3 guys talked about that, but if you have more 4 to say. And that's the last one that I had 5 6 If anyone thinks that they had marked down. 7 a question that they previously asked that 8 hasn't been answered, we can talk about it, 9 because I want to make sure those get 10 answered. I don't want to open it back up 11 to more comments, because things can kind of 12 spiral from there. But anything that didn't 13 get answered? 14 Can I respond, since my MR. MANION: 15 name was mentioned? 16 MR. PARMENTIER: I don't want to go --No, no, but I think it 17 MR. MANION: 18 lends to the credibility of MCC and their 19 goodwill towards the community. 20 You know, that was a good public 21 relations speech about geology, but I have 22 emails from Todd Vande Hei when I was going 23 to buy a property, the Dennison property, 24 which was a sand mine, and I decided not to

25

99

be in that business. Todd -- I offered it

1 to MCC to buy it. Todd sent me an email and 2 said we're going to pass on purchasing it, 3 but we would love to be the operator and 4 process the material. 5 So credibility goes to those who are 6 And in this case, this -- maybe truthful. 7 his memory fails him, but all of this is 8 just public-relation speeches about why this 9 is so good for the community. I think we've 10 spoken as a community. And like, you know, 11 Dave and others have said, the board 12 represents the people. And my question, my 13 very simple question of when are you going 14 to start reclamation if you're at 840 was 15 talked all around, but it wasn't addressed 16 and it was not answered. 17 MR. PARMENTIER: You guys, I don't 18 want to get into --19 MR. MANION: No, that's all I have to 20 say. 21 MR. VANDE HEI: Can I at least just 22 respond to --23 MR. PARMENTIER: You guys can talk --24 MR. VANDE HEI: I'm not going to 25 create any -- I would just like to say to

1	Mr. Manion, if that is the case, I'll be
2	the first one to stand up and tell you I
3	my memory is not good. But if that is
4	the case, I'll be the first one to admit it
5	and tell you. My knowledge and my
6	recollection
7	MR. MANION: Doesn't matter.
8	MR. PARMENTIER: Yeah, I don't want
9	to keep it that's not
10	MR. SWEENEY: Reclamation's going to
11	happen when it's appropriate based upon the
12	operation plan of the mine, and it has to be
13	when you have enough room for your stockpiles
14	to operate. You take materials into a mine
15	so you have sometimes they sell these
16	holes in the ground for more money at the
17	end, because you need materials in order to
18	dispose of them. So it will happen when
19	it's ready from an operational point of view.
20	MR. PARMENTIER: All right. With
21	that anything more from MCC? Okay.
22	MS. NEUENFELDT: I just had I had
23	one question.
24	MR. PARMENTIER: Okay.
25	MS. NEUENFELDT: Were you at one
	101

1	point because I know you were talking
2	about the materials staying within the
3	community. Right? That's correct?
4	MS. COURTER: They're within that
5	circle there. They're not like being
6	shipped to Milwaukee or Chicago.
7	MS. NEUENFELDT: Because weren't you
8	shipping sand out for fracking, earlier, to
9	the Dakotas? Or am I
10	MR. CARPENTER: We were actually
11	shipping it to Readfield. John Carpenter.
12	UNIDENTIFIED SPEAKER: Then where'd
13	it go from Readfield?
14	MS. NEUENFELDT: But I mean, they
15	weren't fracking in Readfield.
16	MR. CARPENTER: We sold it to
17	somebody. We stockpiled in Readfield and
18	they put it on a train and hauled it out.
19	So, yeah, they didn't
20	MS. NEUENFELDT: Okay. That's all.
21	MS. COURTER: Yeah, and I'm not sure
22	that they're doing that. So that's not
23	MS. NEUENFELDT: No, I just no, I
24	mean that I just had I just was kind
25	of surprised

1 MS. SWEENEY: I can address that. 2 The money from the operation, your transportation costs and your trucking 3 costs, are substantial. So the further you 4 5 haul this material outside of it, the more 6 money you have to pay for trucking on it. 7 So when you have a quarry close to this 8 area, it provides a relatively inexpensive 9 cost instead of having to pay large trucking 10 costs. 11 MS. NEUENFELDT: Sure. 12 MS. SWEENEY: There's some areas of 13 the country where you might be trucking 50 14 miles from some of your aggregate. 15 MS. NEUENFELDT: Sure. 16 MR. SWEENEY: We don't have to here. 17 We have a good source of material that's 18 close to the residents here. 19 MS. NEUENFELDT: Sure. 20 MS. COURTER: So I'd just add that, 21 if I may, that, you know, I think Highway 15 is a road that everybody is, you know, 22 23 using, and welcoming with the better access, 24 but most of that material came out of the 25 New London quarry because it was closest to

the project. So if there's a big project in Green Bay, this material is not going up to Green Bay, because it won't be the closest quarry for that project. I guess that -- because transportation's the biggest cost.

And I think, you know, especially because it's cyclical, when you have a lot of projects close to home, you're going to see more activity at the quarry than some other years, you don't know that it's, you know, a quarry at all, because we don't have that volume happening. And so it's, again, market conditions, the ups and downs, and it does relate to reclamation as well.

MR. PARMENTIER: Shifting up to up here now. Board members, we're not at a point to decide anything. It's not even on the agenda. But if you have, at this point, specific questions about things that you heard that you need clarification on, you can ask. If you feel like you need to digest it first or you don't have any questions, then don't ask any questions. You'll have an opportunity at the next meeting to do that.

1 So anything more from anybody up here 2 in terms of what you heard that you need 3 clarification on, or do you feel like you've 4 heard what you need? 5 (Brief discussion off the record.) 6 MR. PARMENTIER: Other questions up 7 here on anything? Otherwise, I can talk 8 about what we do now. 9 MR. HAMBLIN: I do have a question. MR. PARMENTIER: 10 Yes, sir. 11 MR. HAMBLIN: This is for MCC. And 12 this is in regards to the percussions of 13 blasting that the residents are feeling. 14 You had shown a slide up there, one of your 15 things, showing the peak particle velocity, 16 I believe it was called, that you're well below state standards. I think standard is 17 18 2 and you guys were .19? I could see it 19 very well because of my glasses. 20 MS. COURTER: Yeah it's also in our 21 application. I just thought the graph would 22 be easier to see, but we do have our --23 MS. SWEENEY: We have our blaster 24 here that might be able to address it. Yeah, I'm looking for 25 MR. HAMBLIN:

what peak particle velocity is and why that matters, and more importantly, if it's so low, why are they still feeling such a blast? So there's got to be some science behind that you can share with everybody.

MR. KONKLE: Yep, I'll try my best.

MR. KONKLE: Yep, I'll try my best. Garrett with MCC. Yeah, blasting. So, sorry for making some people upset. But to answer your question about peak particle --peak particle velocity is basically the displacement of the vibration going through the earth, essentially.

And as far -- I don't really want to get -- it can get kind of confusing, because you talked about frequencies and non-frequencies. I guess one good thing -- or not just one good thing, but one good thing to point out is why people are feeling it from far away? It is because those frequencies are less, hence earthquakes, they have very, very low frequencies.

That's why you just feel them more.

I guess one thing I should note is any time there is a concern from a neighbor,

I like to be proactive and I address it. 1 Ι contact a gentleman called Dave Friesen, he 2 3 is from the Department of Safety and Professional Service. 4 He's basically a 5 state inspector. He's basically in charge 6 of all us blasters in this state. 7 I contacted him about some concerns 8 of some of the neighbors. I gave him all 9 the information he needed, seismographic 10 reports, GPS coordinates from where we're He told me 11 blasting, where the houses are. 12 that I am doing everything properly to --13 But that being said, I have reduced 14 the amount of holes that we do in a blast, I 15 put less explosives in them, we've switched 16 to different caps. That costs MCC more 17 money, but the neighbors can feel it less. 18 So I'm kind of rambling. Is there any 19 other --20 MR. HAMBLIN: No, no, you're not 21 rambling at all. This is good information. I'm happy to hear that kind of stuff. 22 UNIDENTIFIED SPEAKER: 23 It seems more 24 intense. I don't know --25 MR. KONKLE: It could be the --

there's a lot of other variables to it -- location, where we're --

(Inaudible discussions.)

MR. KONKLE: In some instances we are getting a little closer, so I also try to change the direction of the blast, because that can dictate who feels it or what part of the quarry we're in.

MR. FUNK: I'm going to jump in to help. My name's Mike Funk. I'm the director of compliance and safety. So it's my job to work with the public if you call in and complain. We've tried to work with the public to set up -- Garret puts his people, with your permission, to set up in your yard, there's a certain way to set up the seismograph so we that can read it. It's the direction.

There are different factors -- this is where I'm going to lean on him to help -- but there are different factors; the air blast, cloud cover, wind direction, all these different things feed into how you feel it where you live, and it's different from blast to blast.

1 But Garret mentioned about changing 2 the amounts, depths of the holes, less 3 holes, are things that we've tried to do to 4 lessen the impact on the neighbors. 5 MR. KONKLE: Yep. MR. FUNK: So I've worked with a 6 7 couple of you, we've provided reports. 8 you want to see them, I think Garrett brought 9 a couple along. MR. KONKLE: 10 I did, yep. MR. FUNK: We can provide them to the 11 12 More or less what it is is proof for Town. 13 us to show you that we are doing our best to 14 stay under the limits, like the graph that 15 Sue showed you in general, but these are 16 specific to each blast, there's a minimum 17 of two seismographs set up, different 18 distances, different angles. But those are

19

20

21

22

23

24

25

And in our -- in our history, we've never broken the rules. That's what Mr. Friesen, Dave Friesen, you know, he's

the things that we try and do; one, to

we say. We're trying.

protect us, and, one, to let you know as

residents, you know, that we're doing what

109

Ιf

from the state, watches us very closely to make sure we're following those rules. You know, that's where we get a pat on the back. I should say Garret gets it, but that as a company we pride ourselves in beating those rules and staying under those levels.

So I don't know if that helps. We are open to offering that service to people that are in the area. Obviously, the closer you are, I think the more you're going to see the readings, compared to the distance farther out. But we'll offer that. We can't do everybody at once. I think we have --

MR. KONKLE: We have two. So legally, by the state rules, I have to set one up to the closest inhabited building. But we do have two, so that's where if somebody requests one that is not the closest, we set up there. And it's noted that the seismographs that we have, they are a legal document. I cannot -- once that reading goes off, I can't change nothing on that paperwork on that handout. That's --

MR. FUNK: We can't doctor them. The

1 machines are calibrated be a third party every year to protect us. Again, it's a 2 3 legal way to make sure that we are covered 4 as a company to stay within the rules. 5 we pride ourselves on that. We always have. 6 MR. PARMENTIER: Do you have more 7 questions? I don't want to open it. I'm 8 sure that MCC folks would stick around if 9 you have questions for them outside of 10 the --11 MS. McHUGH: It might be something 12 that everyone wants to hear, though. 13 MR. HAMBLIN: I just have one more 14 question, if that's okay? 15 MR. PARMENTIER: Yeah. 16 MR. HAMBLIN: You mentioned service, and I think that's valuable, and having the 17 18 seismograph offered to residents who request 19 it. Do you also offer service where you 20 guys give advanced warning prior to it 21 happening? 22 MR. FUNK: Yes, we do. 23 MR. DOYLE: Hello. My name's Keith 24 Doyle. I'm the property manager. I do 25 have a couple people that I do send out

1 notifications to. If anybody else would 2 like to be notified, just let me know, I can 3 give you a heads up. I usually do it the 4 day before, so -- and it's usually a text 5 message. Or if you'd like an email, that's 6 fine too, but, yeah, I work with --7 MR. FUNK: So we do it for various 8 Some people ask us to do reasons. 9 notifications 30 minutes before because they 10 have animals that they want to move in or 11 out, depending on the situation. We've 12 worked with all the municipalities in 13 offering this service. If you want to be on 14 it, and there it's just simply asking you 15 what you -- how you want to be notified so 16 that you get a timely notification. 17 MR. PARMENTIER: Do you have a report 18 that you referred to that you want in our 19 pile here? You guys can decide this, but 20 since you referred to something. 21 MR. FUNK: Yes. Yes, we do. We'11 22 bring them up. 23 MR. PARMENTIER: Okay. Can I 24 MR. CLARK: I forgot to ask. 25 just --112

1	MR. PARMENTIER: You guys
2	MR. HAMBLIN: This is the last one.
3	Go ahead. Sate your name again.
4	MR. CLARK: Ryan Clark. I so Mike
5	has been working with me on some of these
6	seismographs in two twenty thousand
7	twenty-four 2024. One of the questions I
8	would like to ask, I guess, and not to use
9	your data against you or anything, but
10	MR. FUNK: No.
11	MR. CLARK: you know, if guys have
12	some seismic data, because I know that the
13	average that Ms. Susie showed on the average
14	was 2019 to I think 2024, right? So that's
15	a big span. But I don't have any
16	seismographs that go back that far. Do you
17	guys have that data that
18	MR. FUNK: Yes.
19	MR. CLARK: you could provide us
20	the graphs for those?
21	MR. FUNK: Between Keith and Garret,
22	everything is kept indefinitely pretty much.
23	MR. KONKLE: So, yeah, legally I'm
24	supposed to keep them state standard's
25	for five years, but we keep them longer.

1	MR. CLARK: Right. Because some of
2	the data I received was a lot of zeros that
3	knock that percentage down, and I have some
4	questions on that. But I think the graphs
5	would help.
6	MR. KONKLE: It could be just
7	location of the cord to the correlation
8	MR. CLARK: Zeroes brings down
9	everything, so I'm just pointing that out.
10	But I think if we look at 2024, I would like
11	to see more of the average of that and in
12	comparison to what's relevant more or less
13	to this expansion, if I could.
14	MR. FUNK: And I think we can work
15	with Sue to get that information.
16	MR. HAMBLIN: All right.
17	MR. PARMENTIER: Back up here.
18	MR. HAMBLIN: Yep.
19	MR. PARMENTIER: Other clarifying
20	questions from you guys or should we talk
21	next steps?
22	MR. HAMBLIN: I think next steps.
23	MR. CLEGG: Next steps.
24	MR. PARMENTIER: So we have the
25	record here. I'm curious. This is a
	114

question for you, Lyn. If we scan that all
in, is it are we able to get that on the
website so that everybody
MS. NEUENFELDT: Yeah.
MR. PARMENTIER: has the ability
to see that?
MS. NEUENFELDT: Yeah.
MR. PARMENTIER: Okay. So
MS. NEUENFELDT: And as a note about
the comprehensive plan, I scanned that and
it's now currently up in PDF form on I'm
working on getting it compressed so it's
easier with our internet access to download
it, but it is available on the website now.
MR. PARMENTIER: So this and the
transcript are our official record now, that
we're going to use be using to make the
decision. We've done
UNIDENTIFIED SPEAKER: Can we add
anything to that then? Like if MCC is making
comments after we make public comments, can
we respond to any of their comments, like
can we email the board or the
MR. HAMBLIN: So your question is if
you want to add additional comments after

this meeting, do you want that part of the official transcript?

UNIDENTIFIED SPEAKER: Or can we -we've asked to make some comments, and you've said, okay, like that time is done, but they've been -- MCC's been able to make comments. So like do we have the -
MR. HAMBLIN: The meeting's -- this is just the open meeting. There's going to be additional meetings that -- where the plan

UNIDENTIFIED SPEAKER: I know, but you're making your decision based on the open record, right?

commission and the board will deliberate.

MR. PARMENTIER: So this is what he's getting at, and here's an answer: It's up to them, not me, but if we wish, we can keep the record open for a period of time.

Right? So if you have something else that you want to submit that you didn't tonight, a comment or something, rather than a bunch of back-and-forth now, you guys could set a period of time, five days, 10 days, a week, whatever it is -- you guys pick -- where if you wish to submit something else to the

record, you can do that, we'll make it part of our record. When we meet again, we'll tell you -- everybody what it is, and then we'll put it up on the website if that ever happens. So if you guys want to make that available to people, you could do that.

MR. CLEGG: Yeah, we can. Is five days enough?

MS. NEUENFELDT: I think -- can I ask -- and this is a personal -- just because I know it's really hard with internet and email, I also would be willing to set a day that if you have something that you personally want to bring me, I can either be here or be -- set a period of time that people are able to bring materials to Is -- I don't know if that me or do that. would be helpful or not, but sometimes emails get lost, or if there's more material to be able to download, or just from a technology point of view. I just want to be available so that you can get the materials that you want entered into the record into the record.

MR. RUFENACHT: For me personally,

1	it's just comments. Hans Rufenacht.
2	MR. PARMENTIER: So what do we think
3	for a time period?
4	MR. HAMBLIN: I would think through
5	next Monday would be
6	MS. NEUENFELDT: Or a week.
7	MR. HAMBLIN: fair enough. Yeah.
8	MS. NEUENFELDT: Yeah.
9	MR. HAMBLIN: Yeah. I'd rather
10	encourage more than discourage communication.
11	MR. PARMENTIER: Okay. So we will
12	keep the record open until the end of the
13	day on Monday. If you want to submit
14	anything Lyn, what's the best way for
15	them to is there an email?
16	MS. NEUENFELDT: So the email, which
17	is at clerk@town. My cell phone number is
18	920-216-0932. If you need to physically
19	drop something to me, you can call me on
20	that number and I will make myself available
21	to collect it from you.
22	MR. PARMENTIER: All right. So is
23	there a question just about the mechanics?
24	MS. PAPESH: No, it's a question that
25	just popped into my head that nobody else
	•

1 raised. 2 MR. PARMENTIER: About the quarry? 3 MS. PAPESH: Yes. 4 MR. PARMENTIER: Send it in a -- send 5 Email it to Lyn or whatever it it this way. 6 might be. So --7 MS. NEUENFELDT: It'll be added to 8 the next meeting. 9 MS. PAPESH: It's something that they might be interested in hearing, actually. 10 11 I'm just wondering -- it's only going to 12 take me a minute. I'm not going to take the floor for 15 minutes. 13 But I've lived on our 14 property for 50 years, and it seems like the 15 last 10 years things have increased 16 dramatically. I'm interested in knowing what the history is, like how much of the 17 18 current mine has been used over a period of 19 time; in other words, you know, did 50 20 percent of the mine get used in the last 15 21 years, or how many blasts occurred 22 initially, compared to the last five years? 23 Just as an example. I think that could be 24 some real interesting information. 25 MR. HAMBLIN: Good. Thank you. What

was your name?

MS. PAPESH: Judy Papesh.

 $\label{eq:mark_parameter} \mbox{MR. PARMENTIER: All right. I'll} \\ \mbox{mark that down.}$ 

MR. HAMBLIN: Thank you.

MR. PARMENTIER: So again, just so everybody's on the same page. Record is here. End of Monday if you want to submit anything -- a comment, a document, a report, whatever it is that you wish -- submit it by the end of Monday. After that, the record is closed. Anything that comes in is too late at that point, so make sure you get it Then we'll put everything online, if that's doable, so that everybody sees this is the final set of everything. Okay? And then that's the official record.

The board and plan commission will then need to schedule a meeting to start the process of sifting through all of this and making a decision. It's going to take some time. We're going to wait to get the transcript -- we're going to wait for the transcript, we're going to wait for the record to close, you're going to need time

1 to look through all of this stuff, review 2 the transcript, make sure you have a good 3 feel for it, and only then should we meet 4 once you guys have had a chance to do all that stuff. 5 6 We could either pick a date right 7 now, since we're all here, a target date to 8 shoot for for that next meeting, or wait and 9 see what comes in then decide based on what 10 we end up with. Do you guys have a 11 preference? 12 MR. CLEGG: No Tuesdays. MS. NEUENFELDT: 13 I think we need to 14 wait --15 MR. PARMENTIER: Wait and see. 16 -- to get through MS. NEUENFELDT: 17 the -- yeah. 18 MR. PARMENTIER: Okay. Lyn's 19 suggestion is we wait and see what we end up 20 with for a record, so we know what we're 21 dealing with. Does that sound okay with 22 everybody up here? 23 MR. CLEGG: Because they can get 24 their information offline, you know, when 25 the meeting is.

MR. PARMENTIER: Ben, did you have a --

MR. HAMBLIN: Yeah, regarding a scheduling, we have kind of a small election coming up. I'm sure the clerk will be kind of busy, so I would think that if we want to schedule any meeting, it would be after November 5th.

MR. PARMENTIER: Yeah, I mean, in my mind, it's going to take just a month just to wrestle with everything that's here, you know, at a minimum, so that seems realistic to me too. So maybe we digest everything, let the record come in, and then we figure it out.

MR. HAMBLIN: Okay.

MR. PARMENTIER: This is the public hearing on all three things that require a public hearing, so there will not be another public hearing. That means there's no legal notice that's required to go in the paper or anything else. Officially all that we have to do is post another meeting. Whether there's more to do beyond that is up to you guys to decide, but there's no more legal

1	notices, there's no more public hearings.
2	That's what tonight was.
3	So, you know, we can think about how
4	we get the word out on what the date is. So
5	if there's more housekeeping to talk about,
6	we can. Otherwise I think we've done what
7	we've set out to do tonight, which is take
8	everything in, and if you're comfortable,
9	then both bodies would separately make a
10	motion to adjourn.
11	MR. HAMBLIN: Okay. I'm looking for
12	a motion to adjourn from the plan commission
13	members.
14	MR. JORDAN: I move that we adjourn.
15	MR. HAMBLIN: I'll second that. All
16	in favor?
17	(All said aye.)
18	MR. CLEGG: I'll make a motion to
19	adjourn the meeting.
20	MS. WILLENKAMP: I'll second it.
21	Nancy Willenkamp.
22	MR. CLEGG: Motion was made and
23	seconded to adjourn. All in favor, say aye.
24	(All said aye.)
25	MR. CLEGG: Opposed? Carried.
	123

1	MR. PARMENTIER: All right. We're
2	adjourned.
3	(Proceedings adjourned at 8:33 p.m.)
